Electric motor

Single-phase, Three-phase

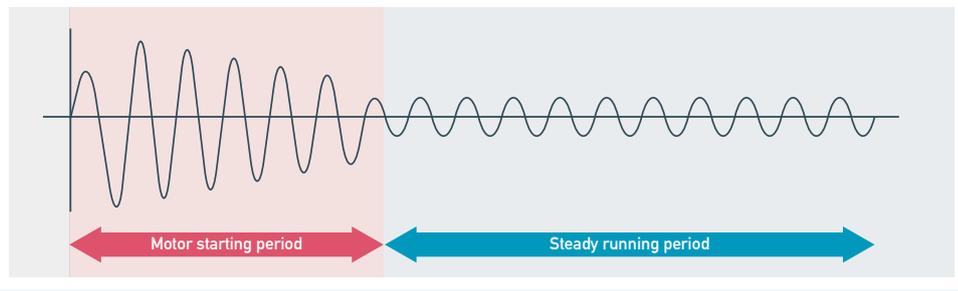

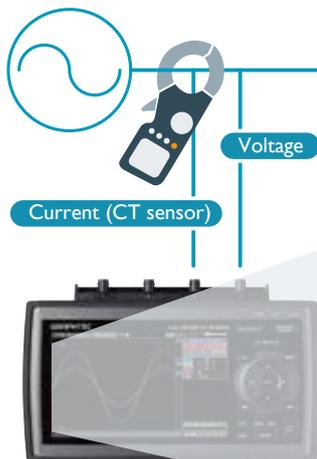

MOTOR START

Example of configuration

Sampling speed : 50kS/s-10kS/s  
Recording time : few sec or longer  
Measured object :

- Current (using CT sensor)  
1 or 3 channels used depending on the type of motor
- Voltage: 1 channel
- RPM (using B-513 pulse input)
- (Temperature)

Problem caused by inrush current

- Welding of power switch
- Excessive stress on rectifier
- Damage on the coil
- Negative influence for connected equipment

# Advantage of using Graphtec GL2000/980

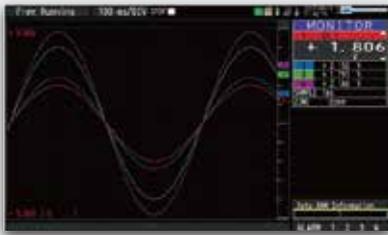

## Handy and Portable

- External dimension : Approx. 260 x 161 x 85 mm
- Weight : Approx. 1.7kg
- Battery operation with optional battery (B-569)  
Up to two batteries can be inserted.  
Max. operating time approx. 5 hours.(GL2000) 2.5 hours.(GL980)
- Including protect cover

### Search Level function

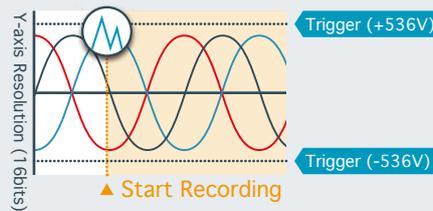

## CAT III 600V Compatible (GL2000)

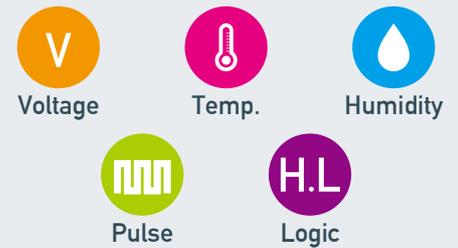

Can be used for phase voltage measurement for 3P motor

## High Speed (1MS/s), High Resolution

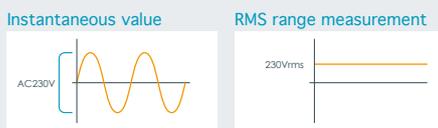

16-bit A/D detects fast & micro variation

## Multi-input

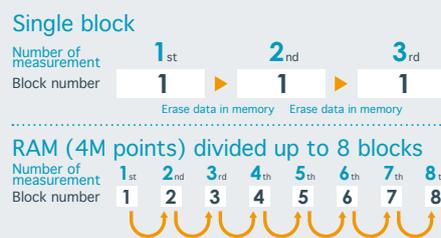

Current, voltage, RPM and temperature meas. in single file

## RMS Measurement

Useful to see relevance to other signals

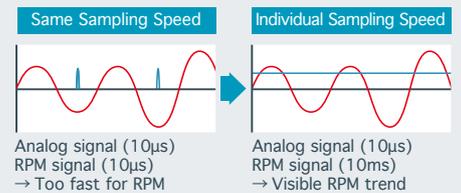

## RAM block segmentation

Useful for cycle test with repeated recording

## Individual sampling speed setting for pulse input

### Individual sampling speed setting on Pulse

Actual RPM can be monitored with correct waveform

- Due to the possibility of equipment or PC failure, the data files on the instrument will not be guaranteed to be held on the memory. Please make a backup of data whenever possible to avoid data loss.

**Warning:** For using equipment in correctly and safely : Before using it, please read the user manual and then please use it properly in accordance with the description. To avoid malfunction or an electric shock by current leakage or voltage, please ensure a ground connection and use according to the specification.
